HOW TO READ A MUTUAL FUND FACTSHEET?

LIC MUTUAL FUND

Khushiyaan, Zindagi Ki...

Do you know your Mutual Fund investment portfolio?

Do you know where your money is invested, or which stocks and sectors were added/removed after you invested in the fund?

Do you know your fund manager and his past performance?

Do you keep up with changes happening with your investments?

As an investor, you should seek answers to these questions before & after investing in a particular Mutual Fund. The Mutual Fund factsheet is a crucial source of information, facts, terminologies, figures, and disclosures that every investor should be aware of while investing in a particular fund.

IMPORTANCE OF A MUTUAL FUNDS FACTSHEET

- For potential investors, it is necessary to check a mutual fund from various aspects before investing. A mutual fund factsheet helps to understand the risk, return, the fund's objective, portfolio allocation, etc.
- With growing awareness about investments and the active promotion of mutual fund schemes, some investors may get trapped by misinterpreting mutual funds. Carefully reading a factsheet may help them understand the pros and cons of a scheme, which may help them to choose only those that suit their investment objectives and avoid others.

COMPONENTS OF A MUTUAL FUNDS FACT SHEET

BASIC FUND INFORMATION

A mutual fund factsheet usually contains the following basic information about the fund.

- **Investment objective:** It could be to generate capital appreciation, provide regular income, offer liquidity to investors, etc.
- **Category:** The category of the fund is specified. For e.g., equity, debt or hybrid scheme, and sub-categories like large-cap, mid-cap, small-cap, multi-cap equity scheme, conservative hybrid scheme or aggressive hybrid scheme, etc.
- **Type of scheme:** It could be an open-ended, close-ended or interval scheme, growth or dividend fund, liquidity fund, etc.
- **Assets under management:** The total sum of the market value of all securities in the scheme.
- Benchmark index against which the performance of the scheme can be compared.
- The minimum amount of investments required for a lump sum or a Systematic Investment Plan (SIP).
- **Exit load:** An investor would need to pay charges for redeeming mutual fund units or exiting the mutual fund scheme.
- **Riskometer:** It indicates the level of risk involved in the concerned mutual fund. The needle of the risk-o-meter points to the degree of risk involved, which can be low, low to moderate, moderate, moderately high, high or very high.

PORTFOLIO ALLOCATION

Mutual funds involve an investment of pooled money across various assets and sectors. The mutual fund factsheet constitutes crucial information about the portfolio allocation, which can give you the answer to the following questions:

- In which assets is the money being invested?
- What percentage of net assets is invested in which assets/ securities?
- In which industries/ sectors is the money being invested?
- What percentage of net assets is invested in which industries?
- What percentage of net assets is invested in which companies?
- How much cash is idle?

PERFORMANCE ANALYSIS

Another crucial part of a mutual fund factsheet is the details of the fund's historical performance. Usually, this part includes a comparison of scheme returns, SIP returns, returns against the benchmark, and the overall return of the market for one year, three years, five years, ten years or more.

DETAILS ABOUT THE FUND MANAGER

The mutual fund factsheet includes details about the fund manager's qualifications and experience. It may also contain information about the historical returns of the funds managed by the fund manager.

It is important to understand the factsheet because fund managers will analyse market trends, make investment strategies and ensure legal compliance. They are going to make investment decisions which can have a significant impact on returns generated by mutual funds.

EXPENSE RATIO

(Regulation 66 of SEBI (Mutual Funds) Regulations, Effective April 1, 2026)

Base Expense Ratio (BER) & Total Expense Ratio (TER)

TER = BER + Brokerage Cost + Transaction Cost + Statutory Levies (incl. GST)

Note: As per revised SEBI disclosure norms effective April 1, 2026, Brokerage costs, transaction costs, and statutory levies are now included within TER for enhanced transparency. All expenses charged to the scheme are within SEBI-prescribed limits.

CONCLUSION

You don't have to be a market expert to stay on top of your investments. However, it is important to learn some basics even when you consult a professional. You can start with a mutual fund factsheet and read more about mutual funds and their working. The factsheets are fairly easy to read and provide deep insight into your mutual fund working.

CEO's write up

Dear Investors,

Investing often teaches us a lesson that is easy to understand in theory, but much harder to practice in reality: the most productive course of action is not always the most active one. Over the past several months, markets have moved through phases of optimism, caution, recovery, and consolidation, influenced by a mix of global developments, shifting interest rate expectations, geopolitical events, and evolving economic data. While these movements have created periods of uncertainty, they have also served as a timely reminder that volatility is not an interruption to the investment journey. It is very much a part of it.

In today's information rich environment, investors are exposed to a constant stream of news, opinions, forecasts, and market commentary. Every market movement is dissected instantly, often creating an impression that decisive action is required at every turn. Yet, when we look back at market history across decades and cycles, one principle has consistently stood the test of time: enduring wealth is rarely created by reacting to every market fluctuation. More often, it is created by remaining committed to a well-considered investment plan through both favourable and challenging phases.

The recent market environment exemplifies this reality. While headline indices and sectors have witnessed varying degrees of movement, the underlying strength of India's long term growth story remains noteworthy. The country's economic fundamentals continue to be supported by resilient domestic demand, sustained infrastructure creation, increasing formalization of the economy, technological advancement, and rising participation of households in financial assets. These are structural trends that unfold over years, not quarters, and they have the potential to shape investment outcomes far more meaningfully than short term market sentiment.

It is also worth remembering that markets are inherently forward looking. They often begin to price in future opportunities well before certainty emerges and, equally, can react sharply to concerns that may eventually prove temporary. This is why periods that feel uncomfortable in the moment have historically also presented some of the most meaningful opportunities for long term investors. The challenge, therefore, is not merely identifying opportunities but maintaining the discipline and perspective required to participate in them.

For investors pursuing long term goals, whether wealth creation, retirement planning, children's education, or other financial aspirations, consistency remains a powerful ally. Systematic investing during periods of market volatility can help smooth the investment journey, allowing investors to accumulate assets across different market conditions. While short term outcomes may appear uneven, disciplined investing across market cycles has historically rewarded patience and perseverance.

Every market cycle has its own narrative. Some are driven by exuberance, some by caution, and many by a combination of both. What remains constant is the importance of staying focused on long term objectives rather than allowing short term developments to dictate long term decisions. As investors, it is often beneficial to step back from the daily ebb and flow of markets and view investment decisions through the lens of years rather than weeks or months.

As we move ahead, uncertainties will continue to surface, as they always do. Markets may remain patchy, sentiment may fluctuate, and new challenges may emerge. However, experience suggests that investors who remain invested, stay disciplined, and maintain a long term perspective are generally better positioned to benefit from the opportunities that inevitably accompany periods of change and uncertainty.

At LIC Mutual Fund, we remain committed to helping investors navigate evolving market conditions with prudence, patience, and conviction. While no one can predict the precise course of markets in the near term, our belief in the power of disciplined long term investing remains unwavering. In an environment where volatility may continue to command headlines, staying invested may well be the most important investment decision of all.

Happy Investing.

Ashis Kumar
Managing Director & Chief Executive Officer
LIC Mutual Fund Asset Management Limited

Market Review & Outlook

Mr. Sudhanshu Asthana
Chief Investment Officer- Equity

EQUITY

Market Review

- Indian equity markets witnessed a mixed performance in October 2026, with the Nifty 50 Index gaining 1.91% during the month, while broader markets underperformed, as the Nifty Midcap 150 Index declined 3.75% and the Nifty Smallcap 250 Index fell 5.81%. The divergence between large-cap and broader market segments reflected a cautious investment environment, with investors showing a preference for relatively stable large-cap stocks amid evolving domestic and global developments.

- Sectorally, performance remained varied across markets. The BSE IT Index emerged as the top-performing sector, rising 14.77%, supported by strong investor interest in technology stocks. Healthcare +0.24% was the only other sector to deliver positive returns during the month. On the downside, weakness was witnessed across most sectors, with Capital Goods (-7.18%), Metals (-6.79%), Consumer Durables (-4.85%), Realty (-4.27%), and Power (-4.30%) registering notable declines. Auto (-3.78%), FMCG (-2.93%), Oil & Gas (-2.30%), and Bankex (-0.50%) also ended the month lower.

- On the macroeconomic front, consumer price inflation (CPI) rose to 5.54% in September 2026, reaching a nearly two-year high, while Wholesale Price Index (WPI) inflation increased to 11.39%, indicating elevated price pressures across both consumer and wholesale segments. Inflation remained a key area of focus during the month, given its implications for the broader macroeconomic and interest rate environment.

- India's domestic economic environment remained broadly resilient during October 2026, supported by healthy corporate earnings, steady domestic demand conditions, and continued infrastructure-led investments. Inflation remained a key area of focus, with market participants closely monitoring price trends and their implications for monetary policy. Despite heightened market volatility, the medium-term growth outlook continued to be supported by robust economic fundamentals and sustained participation from domestic investors.

- Global markets remained influenced by evolving geopolitical developments, movements in crude oil prices, and expectations regarding the interest rate trajectory of major central banks. Investor sentiment was shaped by global inflation trends and their potential impact on monetary policy decisions across developed economies. Against this backdrop, fluctuations in global risk appetite and foreign capital flows continued to influence market sentiment and investment activity across emerging markets, including India.

- Foreign Institutional Investors (FIIs) remained net sellers during October 2026, with net equity outflows of ₹ 34,843 crore (approximately USD 3.6 billion) from the Indian equity market. The continued selling by foreign investors reflected a cautious investment environment amid evolving global macroeconomic and market conditions. Despite varying monthly flows, cumulative FII outflows over the preceding twelve months remained elevated at ₹ 3,21,521 crore (approximately USD 34.3 billion), highlighting the sustained impact of foreign capital movements on market sentiment.

Market Outlook

- The backdrop remains challenging, with escalating US-Iran tensions and continued attacks fuelling supply concerns and pushing crude oil prices higher. Global central banks largely paused monetary tightening this month, with the US Fed, BoJ, RBNZ and ECB keeping policy rates unchanged. However, persistent Middle East tensions and the associated risk of elevated commodity prices could necessitate further tightening, with the BoE potentially raising rates for the first time this year amid higher inflation and firm wage growth. Domestically, the RBI raised the policy rate by 25bps for the first time in nearly four years and shifted its stance from neutral to calibrated tightening.

Market Review & Outlook

- The INR appreciated 0.9% in Oct'26 despite rising external headwinds. As the currency came under pressure near record-low levels, the RBI announced measures to support the INR, including steps to curb speculative activity and a special window to meet OMCs' daily dollar requirements. RBI mobilised $133 billion through FCNR(B) deposits.

- India's growth story remains anchored in expectations of improved consumption, a renewed emphasis on domestic manufacturing, robust capital buffers in banks, and deleveraged balance sheets of large corporates, which bode well for medisssum- to long-term prospects. In the short term, growth risks arise from geopolitical tensions and economic slowdowns in key export markets. However, these challenges are balanced by strong high-frequency domestic indicators and ongoing infrastructure development.

- Our preference is to focus on established market leaders who are less susceptible to disruption and demonstrate the ability to innovate within their business segments, ensuring their leadership position and competitive edge remain robust. Sustainable value creation is a core principle of our investment strategy, which prioritizes companies with strong governance standards, high capital efficiency, defensible franchises with significant moats, and long-term growth potential.

(Power is represented by the BSE Power Index, Consumer Durables by the BSE Consumer Durables Index, Healthcare by the BSE Healthcare Index, Capital Goods by the BSE Capital Goods Index, Oil & Gas by the BSE Oil & Gas Index, Auto by the BSE Auto Index, Metals by the BSE Metal Index, Banking by the BSE Bankex, FMCG by the BSE FMCG Index, Realty by the BSE Realty Index, and Information Technology by the BSE IT Index)

MUTUAL FUND INVESTMENTS ARE SUBJECT TO MARKET RISKS, READ ALL SCHEME RELATED DOCUMENTS CAREFULLY.

Market Review & Outlook

Mr. Rahul Singh
Chief Investment Officer- Fixed Income

DEBT

Market Review

- In its October Monetary Policy Committee (MPC) meeting, the Reserve Bank of India (RBI) unanimously decided to hike the policy repo rate by 25 bps to 5.50%, taking the Standing Deposit Facility (SDF) rate to 5.25% and the Marginal Standing Facility (MSF) rate to 5.75%. The MPC also shifted its policy stance from neutral to calibrated tightening. However, two of the six MPC members voted to retain the neutral stance, citing concerns over the potential moderation in private investment and its impact on demand in interest-rate-sensitive sectors.
- The MPC revised its real Gross Domestic Product (GDP) growth projection for FY27 upwards by 40 bps to 7.1%. Growth is projected at 7.2% in Q2, 6.9% in Q3 and 6.8% in Q4, while GDP growth for Q1 FY28 is projected at 7.1%. On the inflation front, Consumer Price Index (CPI) inflation for FY27 is projected at 5.2%, with quarterly estimates of 4.9% in Q2, 6.0% in Q3 and 5.7% in Q4. Inflation for Q1 FY28 is projected at 5.6%, indicating that price pressures are expected to remain elevated over the coming quarters.
- The MPC minutes highlighted that the decision to hike rates rather than adopt a wait-and-watch approach was primarily driven by emerging inflationary pressures. Rising input costs arising from geopolitical tensions and El Niño-related concerns are expected to gradually feed into output prices. The MPC also noted that inflationary pressures were becoming broad-based across a larger share of the CPI basket. Accordingly, the rate hike was largely pre-emptive in nature, aimed at containing potential second-round effects of supply-side inflation.
- Headline CPI inflation for September rose to 5.5% YoY, an increase of 70 bps over the August print of 4.8%, reflecting a broad-based increase in price pressures across the basket. Core inflation also edged higher, primarily driven by rising metal prices, while super-core inflation remained elevated. Food inflation accelerated, led by higher prices of sugar, fruits, vegetables, spices, meat and fish. Transport services inflation also increased, largely reflecting elevated fuel prices. Rural inflation witnessed a sharper increase compared to urban inflation.
- Going ahead, inflationary risks remain tilted to the upside, primarily due to geopolitical uncertainties and the potential impact of El Niño on monsoon conditions. Lower reservoir levels could weigh on Rabi sowing and agricultural output, adding to food inflationary pressures and affecting other key sectors.
- The US Federal Open Market Committee (FOMC), in its October meeting, maintained the status quo, keeping the federal funds rate unchanged in the range of 3.75–4.00%, in line with market expectations. However, two of the 12 members voted in favour of a 25 bps rate hike, citing persistent inflationary concerns.
- The Committee's decision to maintain rates was supported by resilient economic growth and stable labour market conditions, despite inflation remaining elevated. With no explicit forward guidance on the future rate trajectory, the FOMC indicated that its subsequent policy decisions would remain data-dependent, with incoming economic indicators and inflation trends playing a key role in determining the timing and direction of future rate adjustments.
- System liquidity remained in surplus during the first week of October, following which the RBI conducted its fourth Open Market Operations (OMO) sale of ₹ 25,000 crore, alongside other liquidity management measures, including FX interventions and Variable Rate Reverse Repo (VRRR) auctions, to absorb surplus liquidity. During the third week, system liquidity turned into deficit, primarily due to GST-related and IPO-related outflows.
- The RBI also increased the daily maintenance requirement for banks' Cash Reserve Ratio (CRR) from 90% to 99%. Additionally, the introduction of the Foreign Exchange Reserve Ratio (FERR) requires banks to maintain an INR reserve with the RBI equivalent to 20% of the notional amount of specified derivative transactions involving the purchase of foreign currency against the INR. The measure is aimed at curbing excessive speculative positioning and reducing unhedged foreign exchange exposures. It could also moderate hedging demand and forward premiums, thereby supporting rupee stability.
- The overnight money market rate hovered around 5.25% during the first week of October before moving higher to around 5.75%. It subsequently remained elevated in the range of 5.65–5.80%, reflecting the tightening liquidity conditions during the month.
- The domestic 10-year G-Sec yield remained volatile during October, touching an intra-month high of 7.49% before easing to around 7.38%. Despite briefly approaching the psychological 7.50% mark, the yield did not breach this level and eventually closed the month at 7.41%.
- On the global front, the US 10-year Treasury yield eased below the 5% mark during the month, providing some relief to global bond markets.

Market Outlook:

- Going ahead, domestic bond yields are likely to remain volatile with an upward bias, driven by elevated crude oil prices, geopolitical uncertainties and inflationary concerns. Despite the decline in US Treasury yields, domestic yields continue to face upward pressure, largely reflecting concerns over imported inflation and its impact on the fiscal and inflation outlook. The RBI's calibrated tightening stance and its assessment of evolving inflation trends will remain key factors in determining the trajectory of domestic yields. Markets will closely track incoming inflation data and liquidity conditions ahead of the next MPC meeting. Globally, the FOMC's data-dependent approach will keep markets sensitive to incoming economic indicators.

Mr. Sasikant Aravamuthan	20 years	July 01, 2026

Minimum Investment

Lump sum Amount :

Authorized Participants & Large investors – In creation unit lot of 1,20,000 units and multiples of 1,20,000 units thereof or in equivalent amount in cash. The AMC will not accept Portfolio Deposit (i.e. physical gold) from its investors. However, the AMC at its absolute discretion may accept Portfolio Deposit (i.e. physical gold) from Authorized participant subject to the satisfaction of conditions prescribed by the custodian appointed by the Mutual Fund for the custody of Gold.

As per Paragraph 6.12 of SEBI Master Circular for Mutual Funds the Scheme will offer units for subscription / redemption directly with the Mutual Fund for amounts greater than Rs.25 Cr at intraday NAV based on the actual execution price of the underlying portfolio on all Business Days during the ongoing offer period. The aforesaid threshold will not be applicable for Market Makers and will be periodically reviewed. The requirement of "cut-off" timing for NAV applicability as prescribed by SEBI from time to time will not be applicable for direct transaction with LIC AMC in ETFs by Market Makers and other eligible investors.

Other investors – On an ongoing basis, other investors may subscribe to the units of the Scheme by purchasing the units from the Stock Exchange where the Scheme is listed.

Minimum size for subscription on the Stock Exchange – 1 unit or in multiples thereof.

SIP Amount : –

Load Structure

Exit Load: Nil

Liquidity: The Units of the scheme are listed on National Stock Exchange(NSE) & Bombay Stock Exchange Ltd.(BSE).

GLOSSARY

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme

Asset allocation:

Investment of certain proportions of a portfolio in different assets classes like Equity, Debt, Gold etc..

Asset allocation for Equity:

The allocation is based on industry classification and not any separate sector classification.

AUM:

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-year Gsec.

Beta:

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Entry Load:

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry Load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assestment of various factors including the service rendered by the distributor.

Exit Load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance if the NAV is Rs 100 and the exit load is 1%, the investor will receive Rs 99.

Expense ratio:

The expense ratio is the annual fee that funds or ETFs charge their unit holders. It expresses the percentage of assets deducted each fiscal year for fund expenses.

Holdings:

The holdings or the portfolio is a mutual fund's latest or updated report statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Fund Manager:

An Employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Maturity profile:

Maturity is a term defined with respect to Debt Instruments which have fixed maturities after which they cease to exist on payment of the principal and the stipulated interest. A fund's profile consisting of the allocation of the value of assets in terms of percentage and their time left to maturity respectively is called a maturity profile. It gives a summary of the breakup of the value of assets with different specified maturities.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Macaulay Duration:

Macaulay Duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

Modified Duration:

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Nature of Scheme:

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have subcategories.

NAV:

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Portfolio turnover ratio:

Portfolio turnover is a measure of how frequently assets within a fund are bought and sold by the managers. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets. Number of securities bought or sold (whichever is lesser)/Average AUM of the Fund.

Portfolio Yield:

Disclosure only required for Debt Funds.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Risk Free Returns:

MIBOR rate for 1 day. To be sourced from FIMMDA (http://www.fimmda.org) for last day of the month.

Sector allocation:

Sector allocation may be defined as an allocation of funds in a certain percentage of the portfolio in different sectors of the economy.

Sharpe Ratio:

The Sharpe Ratio, names after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

SIP:

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. Its works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that the invests Rs 500 every 15 of the month in an equity fund for a period of three years.

SIP Return:

The SIP return calculation should be based on Rs. 10,000 invested every month. Returns would be 1 year, 3 year, 5 year, 7 year etc.

Standard Deviation:

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, its means its range of performance is wide, implying greater volatility.

Tracking error:

Tracking error is the difference between the return fluctuations of an investment portfolio and the return fluctuations of a chosen benchmark. The return fluctuations are primarily measured by standard deviations.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
