1. INTRODUCTION

A. RISK FACTORS

STANDARD RISK FACTOR:

1. Mutual Fund and securities investments are subject to market risks and there can be no assurance or guarantee that the objectives of the Scheme will be achieved.
2. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
3. As the price / value / interest rates of the securities in which the Scheme invest fluctuate, the value of your investment in the scheme may go up or down depending on the various factors and forces affecting government securities market and money markets.
4. Past performance of the Sponsor / AMC / Mutual Fund does not guarantee future performance of the Scheme and may not necessarily provide a basis of comparison with other investments.
5. LIC MF ETF – SENSEX, is the name of the Scheme and do not, in any manner, indicate either the quality of the Scheme or their future prospects or returns.
6. The Sponsors are not responsible or liable for any loss resulting from the operation of the Schemes beyond the initial contribution of Rs. 2crs made by it towards setting up the Fund.
7. The present scheme is not guaranteed or assured return scheme.

SCHEME SPECIFIC RISK FACTOR:

- a. The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the Scheme Information Document & Statement of Additional Information.
- b. Redemption by the unit holder due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, Fund their directors or their employees shall not be liable for any tax consequences that may arise.
- c. The tax benefits described in the SAI & SID are as available under the present taxation laws and are available subject to relevant condition. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India and the Investors and Unit Holders should be aware that the relevant fiscal rules or their interpretation may change. As in the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of the investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor / Unit holder is advised to consult his/her/its own professional tax advisor.
- d. LIC MF ETF SENSEX would be investing in equities. money market instruments (such as Triparty Repo or as defined by SEBI regulations, term/notice money market, repos, reverse repos and any alternative to the call money market as may be directed by the RBI). The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.
- e. The Mutual Fund is not assuring any dividend nor is it assuring that it will make any dividend distributions. All dividend distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme.
- f. Portfolio concentration risk : ETF being a passive investment carries lesser risk as compared to active fund management. The portfolio follows the index and therefore the level of stock concentration in the portfolio and its volatility would be the same as that of the index, subject to tracking error. Thus there is no additional element of volatility or stock concentration on account of fund manager's decisions.

RISK FACTORS ASSOCIATED WITH INVESTMENTS IN EQUITY AND EQUITY RELATED SECURITIES:

- Equity and Equity related instruments on account of its volatile nature are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro economic factors

affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.

- The inability of the Scheme to make intended securities purchases due to settlement problems, could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances.
- Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio.
- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments. This may impact the ability of the unit holders to redeem their units. In view of this, the Trustee has the right, in its sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.
- The AMC may invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio as these unlisted securities are inherently illiquid in nature and carry larger liquidity risk as compared to the listed securities or those that offer other exit options to the investors.
- Investments in equity and equity related securities involve high degree of risks and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.

RISKS ASSOCIATED WITH MARKET TRADING:

- **Absence of Prior Active Market:** Although the units of Exchange Traded Funds are listed on the Stock Exchange for trading, there can be no assurance that an active secondary market will develop or be maintained.
- **Lack of Market Liquidity:** Trading in units of Exchange Traded Funds on the Stock Exchange on which it is listed may be halted because of market conditions or for reasons that, in the view of the concerned Stock Exchange or Market Regulator, trading in the Exchange Traded Fund Units is inadvisable. In addition, trading in the units of Exchange Traded Funds is subject to trading halts caused by extraordinary market volatility pursuant to 'circuit breaker' rules. There can be no assurance that the requirements of the concerned Stock Exchange necessary to maintain the listing of the units of Exchange Traded Funds will continue to be met or will remain unchanged.
- **Units of Exchange Traded Funds May Trade at Prices Other than NAV:** Units of Exchange Traded Funds may trade above or below their NAV. The NAV of Units of Exchange Traded Funds may fluctuate with changes in the market value of a Scheme's holdings. The trading prices of units of Exchange Traded Fund will fluctuate in accordance with changes in their NAVs as well as market supply and demand. However, given that Exchange Traded Funds can be created / redeemed in Creation Units, directly with the fund, large discounts or premiums to the NAVs will not sustain due to arbitrage possibility available.
- **Regulatory Risk:** Any changes in trading regulations by the Exchange or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/ discount to NAV. Although LIC MF Exchange Traded Fund – SENSEX are proposed to be listed on an Exchange, the AMC and the Trustees will not be liable for delay in listing of Units of the Scheme on Exchange / or due to connectivity problems with the depositories due to the occurrence of any event beyond their control.
- **Political Risks:** Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved removal of trade barriers and protectionist measures, which could adversely affect the value of investments. It is possible that the future changes in the Indian political situation, including political, social or economic instability, diplomatic developments and changes in laws and regulations could have an effect on the value of investments. Expropriation, confiscatory taxation or other relevant developments could affect the value of investments.
- **Right to Limit Redemptions:** The Trustee, in the general interest of the unit holders of the Scheme offered under this Offer Document and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day depending on the total "Saleable Underlying Stock" available with the fund.
 - **Redemption Risk** – The Unit Holders may note that even though this is an open ended scheme, the Scheme would ordinarily repurchase Units in Creation Unit size. Thus unit holdings less than the Creation Unit size can normally only be sold through the secondary market, unless no quotes are available on the Exchange for 3 trading days consecutively.
 - **Passive Investments:** As LIC MF Exchange Traded Fund - SENSEX is not actively managed, the underlying investments may be affected by a general decline in the Indian markets relating to its Underlying Index. The scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to take defensive positions in declining markets. Further, the fund manager does not make any judgment about the investment merit nor shall attempt to apply any economic, financial or market analysis.

RISK FACTORS ASSOCIATED WITH INVESTMENTS IN FIXED INCOME SECURITIES:

- **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities

fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. However, debt securities in this scheme are intended to be held till maturity. For such securities held till maturity, there will not be any interest rate risk at the end of the tenure.

- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.
- **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.
- **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Pre-payment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- **Concentration Risk:** The Scheme Portfolio may have higher exposure to a single sector, subject to maximum of 30% of net assets as specified in this SID, depending upon availability of issuances in the market at the time of investment, resulting in higher concentration risk. Any change in government policy / business environment relevant to the sector may have an adverse impact on the portfolio.
- Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities.

RISKS ASSOCIATED WITH SHORT SELLING AND SECURITIES LENDING & BORROWING:

The scheme will not indulge in any Stock Lending & borrowing and Short Selling activities.

RISKS ASSOCIATED WITH INVESTMENT IN ADR/GDR AND FOREIGN SECURITIES: :

The scheme will not have any exposure in ADR/ GDR and foreign securities.

OTHER RISKS

Risk associated with inflation: Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.

Legal Risk: The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.

Valuation Risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.

Past performance of the Sponsor/ the AMC/ the Mutual Fund is not indicative of the future performance of the Scheme. LIC MF Exchange Traded Fund - SENSEX is the name of the Scheme and does not in any manner indicate either the quality of the Scheme; its future prospects or returns.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

As per Circular number SEBI/IMD/CIR NO 10/22701/03 dated December 12, 2003, the above guidelines are not applicable for Exchange Traded Funds. As LIC MF Exchange Traded Fund - SENSEX is an exchange traded fund, same is not applicable.

This may also affect the ability of the other Unit holders to redeem their units.

9. II. INFORMATION ABOUT THE SCHEME

A. NAME & TYPE OF THE SCHEME

LIC MF ETF – SENSEX is an open ended scheme replicating/tracking Sensex Index.

B. INVESTMENT OBJECTIVE OF THE SCHEME

The investment objective of the scheme is to provide returns that, closely correspond to the total returns of the securities as represented by the S&P BSE SENSEX by holding S&P BSE SENSEX stocks in same proportion, subject to tracking errors.

However there is no guarantee or assurance that the investment objective of the scheme will be achieved.

C. HOW WILL THE SCHEME ALLOCATE ITS ASSETS?

UNDER NORMAL CIRCUMSTANCES, THE ASSET ALLOCATION PATTERN WILL BE AS FOLLOWS:

Instruments	Indicative allocations (% of total assets)		Risk Profile
	Minimum	Maximum	High/Medium/Low
Securities covered by the S&P BSE SENSEX	95	100	Medium to High
Cash and cash equivalent /Money Market instruments including Triparty Repo (with maturity not exceeding 91 days)	0	5	Low

Money Market Instruments include commercial papers, commercial bills, treasury bills, and Government securities having an unexpired maturity upto one year, call or notice money, certificate of deposits, usance bills, Triparty Repo and any other like instruments as specified by the Reserve Bank of India from time to time.

The net assets of the scheme will be invested predominantly in securities constituting the S&P BSE SENSEX. This would be done by investing in all securities with the same weightage that they represent in the S&P BSE SENSEX. A small portion of the net assets will be invested in Debt and money market instruments permitted by SEBI / RBI including call money market or in alternative investment for the call money market as may be provided by the RBI, to meet the liquidity requirements of the scheme.

The scheme does not intend to invest in securitized debt instruments and foreign securities. The

Scheme shall not engage in securities lending and borrowing.

The scheme will not engage in short selling activities.

The scheme would not invest in derivatives.

Subject to the SEBI Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. These proportions can vary substantially depending upon the perception of the Investment Manager; the intention being at all times to seek to protect the interests of the Unitholders. Such changes in the investment pattern will be for short term and for defensive considerations only.

Since, LIC MF ETF – SENSEX is a passively managed exchange traded open ended index scheme, therefore change in investment pattern is normally not foreseen. However, for short durations part of the corpus may be pending for deployment, in cases of extreme market conditions or special events.

In the event of any deviations below the minimum limits or beyond the maximum limits as specified in the above table, the Fund Manager shall rebalance the portfolio within a period of 7 days. Also, the AMC shall ensure that in case of involuntary corporate action undertaken in the underlying securities, the portfolio will be rebalanced within a period of 30 days.

D. WHERE WILL THE SCHEME INVEST?

Investment in Equities and equity related instruments: The Scheme would invest in stocks comprising the S&P BSE SENSEX in the same proportion (weightage) as in the Index and endeavour to track the benchmark index.

Investment in money market instrument: The Scheme may also invest in money market instruments, in compliance with Regulations to meet liquidity requirements. The scheme may also invest in liquid schemes of LIC Mutual Fund or of any other fund house. Money Market Instruments include commercial papers, treasury bills, and Government securities having

an unexpired maturity up to one year, call or notice money, certificate of deposit, Triparty Repo and any other like instruments as specified by the Reserve Bank of India from time to time.

The liquid schemes launched by SEBI registered Mutual Fund or schemes that invest predominantly in money market instruments / securities.

The investment restrictions and limits are specified in Schedule VII of SEBI (MF) Regulations, 1996 which are mentioned under the heading 'Investment Restrictions'.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The Fund would invest not less than 95% of its corpus in securities comprising the S&P BSE SENSEX and endeavour to track the benchmark index while minimizing the tracking error and therefore would follow a passive investment strategy. The scheme would aim to maintain least amount of cash & will also try & avoid investment in debt & money market securities. This would only be for the purpose of redemption requirements.

Risk control measures

Since investing requires disciplined risk management, the AMC would endeavour to incorporate adequate safeguards for controlling risks in the portfolio construction process. The Fund Manager will also review all counterparties prior to transacting, using internal guidelines. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the Triparty Repo / repo market, which seeks to ensure liquidity in the scheme under normal circumstances. There can however be no guarantee against liquidity issues within the scheme. The Fund Manager will also endeavour to

actively manage the scheme duration based on the ensuing market conditions. Based on its interest outlook, the Fund Manager may take tactical and/or strategic interest rate calls to manage the investments of the scheme on a dynamic basis in order to exploit emerging opportunities in the market.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time

TRACKING ERROR

While the objective of the Scheme is to closely track the index, the performance may not be commensurate with the performance of the underlying Index on any given day or over any given period. Such variations are commonly referred to as the tracking error.

Tracking errors are inherent in any index fund and such errors may cause the scheme to generate returns which are not in line with the performance of the S&P BSE SENSEX or one or more securities covered by / included in the S&P BSE SENSEX and may arise from a variety of factors including but not limited to:

1. Any delay experienced in the purchase or sale of shares due to illiquidity of the market, settlement and realisation of sale proceeds and / or the registration of any securities transferred and / or any delays in receiving cash dividends and resulting delays in reinvesting them.
2. The S&P BSE SENSEX reflects the prices of securities at close of business hours. However, the Fund may buy or sell the securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the BSE & NSE.
3. The constituent securities of the underlying index may be revised periodically by either excluding or including new securities. In such an event, the Fund will endeavour to reallocate its portfolio but the available investment/ disinvestment opportunities may not permit precise mirroring of the underlying index in a short period of time.
4. The charging of expenses to the scheme including investment management fees and custodian fees.
5. The potential for trades to fail, which may result the Schemes not having acquired shares at a price necessary to track the index.
6. The holding of a cash position and accrued income prior to distribution and accrued expenses.
7. Disinvestments to meet redemptions, recurring expenses, etc.

AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, such tracking errors are not expected to exceed above 2% per annum. However, this may vary due to the reasons mentioned above or any other reasons that may arise and particularly when the markets are very volatile. However, there can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Underlying Index.

Portfolio Turnover

The Scheme shall be a passively managed, Index Linked, open ended, exchange traded fund. It is therefore expected that there would be a number of subscriptions and redemptions on a daily basis through Authorised Participants and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition will be done within 30 days, if any, and corporate actions of securities included in Index.

The scheme has no explicit constraints either to maintain or limit the portfolio turnover. It would be also difficult to have any reasonable accuracy in estimating the likely portfolio turnover. However, the fund manager intends to avoid any

transactions in the portfolio unless there is any subscription, redemption or change in the underlying Index.

F. ABOUT THE INDEX :

SENSEX, first compiled in 1986, was calculated on a "Market Capitalization-Weighted" methodology of 30 component stocks representing large, well-established and financially sound companies across key sectors. The base year of SENSEX was taken as 1978-79. SENSEX today is widely reported in both domestic and international markets through print as well as electronic media. It is scientifically designed and is based on globally accepted construction and review methodology. Since September 1, 2003, SENSEX is being calculated on a free-float market capitalization methodology. The "free-float market capitalization-weighted" methodology is a widely followed index construction methodology on which majority of global equity indices are based.

L. INTRODUCTION TO EXCHANGE TRADED FUND

A) Exchange Traded Fund (ETF)

Exchange Traded Funds are innovative products that provide exposure to an index or a basket of securities that trade on the exchange like a single stock. Exchange Traded Funds have a number of advantages over traditional open ended index funds as they can be bought and sold on the exchange at prices that are usually close to the actual intra- day NAV of the Scheme. Exchange Traded Funds are an innovation to traditional mutual funds as Exchange Traded Funds provide investors a fund that closely tracks the performance of an index with the ability to buy / sell on an intra-day basis. Unlike listed close ended funds, Exchange Traded Funds are structured in a manner which allows creating new units and redeeming outstanding units directly with the fund, thereby ensuring that Exchange Traded Funds trade close to their actual NAVs.

Exchange Traded Funds are usually passively managed funds wherein subscription / redemption of units work on the concept of exchange with underlying securities. In other words, large investors / institutions can purchase units by depositing the underlying securities with the fund / AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange.

Exchange Traded Funds have all the benefits of indexing such as diversification, low cost and transparency. As Exchange Traded Funds are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

The structure of Exchange Traded Funds is such that it protects long-term investors from inflows and outflows of short-term investor. This is because the fund does not bear extra transaction cost when buying / selling due to frequent subscriptions and redemptions.

Tracking Error of Exchange Traded Funds is likely to be low as compared to a normal index fund. Due to the Creation / Redemption of units through the in-kind mechanism the fund can keep lesser funds in cash. Also, time lag between buying / selling units and the underlying shares is much lower.

Exchange Traded Funds are highly flexible and can be used as a tool for gaining instant exposure to the equity markets, equitising cash or for arbitrating between the cash and futures market.

Benefits of EXCHANGE TRADED FUNDS

1. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
2. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at real-time prices as opposed to end of day prices.
3. No separate form filling for buying / selling units. It is just a phone call to your broker or a click on the net.
4. Ability to put limit orders.
5. Minimum investment for an Exchange Traded Fund is one unit.
6. Protects long-term investors from the inflows and outflows of short-term investors.
7. Flexible as it can be used as a tool for gaining instant exposure to the equity markets, hedging or for arbitrating between the cash and futures market.
8. Helps in increasing liquidity of underlying cash market.
9. Aids low cost arbitrage between Futures and Cash market.
10. An investor can get a consolidated view of his investments without adding too many different account statements, as Exchange Traded Funds will be in demat form.

Uses of EXCHANGE TRADED FUNDS:

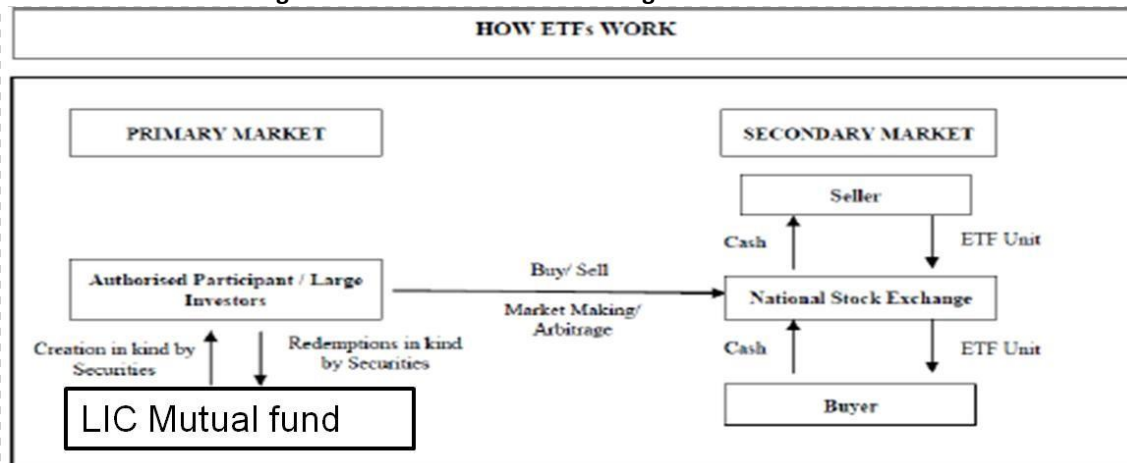

1. **Investors with a long-term horizon:** Allows diversification of portfolio at one shot, thereby reducing scrip specific risk at a low cost.
2. **FII, Institutions and Mutual Funds:** Allows easy asset allocation, hedging at a low cost.
3. **Arbitrage:** Low impact cost to carry out arbitrage between the Cash and the Futures market.
4. **Investors with a shorter term horizon:** Allows liquidity due to ability to trade during the day and expected to have quotes near NAV during the course of trading day.

Comparison of EXCHANGE TRADED FUNDS v/s Open Ended Funds v/s closes Ended Funds:

	Open Ended Fund	Closed Ended Fund	Exchange Traded Fund
Fund Size	Flexible	Fixed	Flexible
NAV	Daily	Daily	Real time (indicative NAV)
Liquidity provider	Fund itself	Stock Market	Stock Market / Fund itself
Sale price	At NAV plus load, if any	Significant premium / discount to NAV	Very close to actual NAV of Scheme

Restriction may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as:</p> <p>i. Liquidity issues - when market at large becomes illiquid affecting almost all securities rather than any issuer specific security. The AMC should have in place sound internal liquidity management tools for schemes. Restriction on redemption cannot be used as an ordinary tool in order to manage the liquidity of a scheme. Further, restriction on redemption due to illiquidity of a specific security in the portfolio of a scheme due to a poor investment decision, shall not be allowed.</p> <p>ii. Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. D.COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit of the respective Plan(s) will be computed by dividing the net assets of the Plan(s) by the number of Units outstanding under the Plan(s) on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time. In case of any conflict between the Principles of Fair Valuation and valuation guidelines specified by SEBI, the Principles of Fair Valuation shall prevail. NAV of Units under each Plan shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\begin{array}{l} \text{Market or Fair Value of the Plan's Investments} \\ + \text{Current Assets} \\ - \text{Current Liabilities and Provisions} \end{array}}{\text{No. of Units outstanding under each Plan}}$$

The AMC will calculate and disclose the first NAV of the Plan(s) not later than 5 Business Days from the allotment of units of the respective Plan(s). Subsequently, the NAV of the Plan(s) will be calculated and disclosed at the close of every Business Day. Each Plan will be managed as a separate investment Portfolio. Separate NAV will be calculated and announced for each of the Options of the respective Plan(s) at the close of every Business Day. The NAVs will be calculated upto 4 decimals. Units will be allotted in whole figure.

a) Methodology of calculating sale/repurchase prices

Methodology of calculating sale price The price or NAV a unitholder is charged while investing in an open-ended scheme is called sale or subscription price. Pursuant to SEBI Circular No. SEBI /IMD/CIR No.4/168230/09 dated 30th June, 2009, no entry load will be charged by the scheme to the unitholders. Therefore, Sale or Subscription price = Applicable NAV

b) Methodology of calculating repurchase price

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a

percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the “Applicable NAV” to calculate the repurchase price. Therefore, Repurchase or Redemption Price = Applicable NAV *(1- Exit Load, if any) For example, If the Applicable NAV of the Scheme is Rs.10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the unitholder redeems units before completion of 1 year, then the repurchase or redemption price will be: = Rs. 10 * (1-0.02) =Rs.9.80
